## **Abstracts**

The Brazilian dental CAD/CAM materials & systems market was valued at \$30 million in 2016, and is expected to reach \$65 million by 2023, growing at a CAGR of 11.5% from 2017 to 2023. CAD/CAM is used in digital dentistry to design and manufacture dental prosthetics and restorations. CAD involves the use of computer technology for design documentation, whereas CAM systems use the models and assemblies created in CAD software to print 3D models of the designed parts. CAD/CAM materials are used to manufacture customized dental prosthetics, unique for every patient.

Rise in incidence of tooth loss in Brazil, advantages of dental CAD/CAM-based restorations over dental lab restorations, technological advancements in dental CAD/CAM systems, and rise in geriatric population in Brazil are expected to drive the market growth. However, high cost of CAD/CAM systems, and limited reimbursements restrain this growth. Upsurge in demand for dental cosmetic surgeries in Brazil is expected to provide numerous opportunities for market expansion during the forecast period.

The report segments the market based on product into dental CAD/CAM systems and dental CAD/CAM materials. The materials segment is further sub-segmented into glass ceramics, alumina-based ceramics, lithium disilicate, zirconia, and others.
