Abstracts

Global busbar market accounted for revenue of \$14.0 billion in 2018 and is anticipated to generate \$23.6 billion by 2026. The global busbar market is projected to experience growth at a CAGR of 6.1% from 2019 to 2026. Busbar consists of a strip or bar of conductor made of aluminum, copper, or brass. It is covered by insulators that connect electrical loads and distribute power in an integrated electrical network for safety purposes. It has applications majorly in switchgears, switchboards, distribution panels, and multiple establishments that are based on consumption of electric power. Aluminum is majorly preferred metal for busbars owing to its high electrical conductivity and lower energy loss during transmission in comparison to other materials.

The government is concerned regarding energy efficiency. The preference of busbars over cables owing to low cost drives the market growth. Wind power and global power generation are now being integrated resulting in increased demand for busbars. The concepts of smart & green cities also act as key factor that boosts the busbar market growth owing to the increased application of busbars. The grey market that offers low-quality and cheap products hinders the busbar market growth. In-addition, the fluctuation in raw material prices and lack of R&D activities also acts as challenge for the market. Meanwhile, emerging applications in switchgears market act as a key factor to offer lucrative growth opportunities to the busbar market.

Global busbar market is segmented on the basis of material type, application, and region. Depending on material type, it is divided into aluminum, copper, and brass. The application covered in the study includes industrial, commercial and residential. Region
