## **Abstracts**

Computer-aided manufacturing (CAM) is a software tool that assists engineers, architects, and other professionals to design and manufacture objects. CAM software refers to the use of a computer to assist in all operations of a manufacturing plant which includes planning, management, transportation, and storage. The primary purpose of the CAM software is to create a faster production process & components and provide more precise dimensions and material consistency. CAM applications are used to design a product and program manufacturing processes, specifically, CNC machining.

Rise in use of CAM software in packaging machinery, surge in industrialization, and increase in investment of R&D activities drive the CAM market growth. However, availability of free and open-source CAM software is expected to impede the market growth. Conversely, increase in adoption of cloud-based solutions and technological advancements in CAM software are expected to present major opportunities for market expansion in future.

The global CAM software market is segmented based on design type, application, and region. Based on design type, the CAM market is classified into 2D and 3D. By application, it is divided into aerospace & defense industry, shipbuilding industry, automobile & train industry, machine tool industry, and others. Based on region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

The report provides the profiles of key players operating in the CAM market, which include Autodesk Inc., Mastercam, SolidCAM Ltd., EdgeCAM, ZWCAD Software Co., Ltd., GRZ Software, BobCAD-CAM, Inc., Cimatron Group, Camnetics, Inc., MecSoft Corporation, Dassault Systèmes, and Siemens Product Lifecycle Management Software Inc.
