## **Abstracts**

Endotracheal tube is a metal or plastic tube introduced in the trachea through the mouth or nose to confirm the adequate exchange of oxygen and carbon dioxide and maintains the patient's airway. Coated endotracheal tube is a specific tube coated with antithrombotic agents to prevent coagulation or antibiotic agents such as polyvinyl chloride, silver, and various drugs to prevent the growth of bacteria on the surface of endotracheal tube. Endotracheal tube is inserted to trachea that needs to be replaced frequently, thus causing excessive discomfort in patients. Hence, to prevent frequent replacements, tubes are treated with antibacterial agents.

The global coated endotracheal tube market generated \$1,629 million in 2016, and is projected to reach \$2,518 million at a CAGR of 6.3% from 2017 to 2023. The major factor that contributes to the growth of the coated endotracheal tube market includes rise in number of surgical procedures due to increase in chronic respiratory diseases such as cardiovascular diseases, respiratory diseases, diabetes, cancer, and other lung injuries. Moreover, increase in prevalence of ventilator associated pneumonia and growth in geriatric population, which is more prone to chronic diseases also boost the market growth. However, post-operative complications related to endotracheal intubation and lack of skilled healthcare professionals hamper the market growth. The development of novel products by key vendors, mainly to avoid ventilator-associated pneumonia (VAP) condition by preventing bacterial colonization and biofilm formation on tube surface and untapped emerging economies, further provide lucrative growth

opportunities for the market.

The coated endotracheal tube market is segmented based on intubation, application, end user, and region. Based on the intubation, the market is bifurcated into orotracheal intubation and nasotracheal intubation. Based on application, the market is categorized into anesthesia, emergency medicine, and others. Based on end user, the market is classified into hospital, clinics, and ambulatory surgical centers. By region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
