## **Abstracts**

The global colposcopes market was valued at \$470 million in 2018, and is projected to reach \$661 million by 2026, registering a CAGR of 4.3%.

The global colposcopes market was valued at \$470.2 million in 2018, and is projected to reach \$661.4 million by 2026, registering a CAGR of 4.3%.

Colposcopy is a medical diagnostic procedure, used to examine portions of cervix, vagina, and vulva for signs of diseases. It is performed using a colposcope. It is performed when results of cervical cancer screening tests show abnormal changes in the cells of cervix. Different types of colposcopes are available in the market, which are portable, handheld, and stationary, used for different conditions such as cervical cancer, genital warts on cervix, and cervicitis.

The market is anticipated to show significant growth during the forecast period, owing to increase in prevalence of cervical cancer, surge in awareness among people towards early screening of the disease, and increase in demand for colposcopes in developing region are the key factors that fuel the growth of the colposcopes market. Moreover, availability of innovative colposcopes, surge in R&D activities to develop technologically advanced colposcopes, availability of cost-efficient products, and development of healthcare industry with advanced facilities across the globe are other factors that

contribute to the growth of the market. However, complications associated with the use of colposcopes are anticipated to hinder the growth of the market.

The colposcopes market is segmented into product type, application, end user, and region. By product type, it is categorized into portable, handheld, and stationary. Depending on application, it is classified into cervical cancer screening and physical examinations. According to end user, it is classified into diagnostic centers, hospitals, and clinics.
