Abstracts

Commercial refrigeration equipment is used to preserve vegetables, fruits, meat, and other similar products by maintaining the temperature at 30°C to ?40°C, thereby increasing the shelf life of the product. In addition, some refrigeration equipment are especially designed to reduce the temperature of hot food from around 90°C to as low as 30°C in a short time period to inhibit bacterial proliferation.

Rise in demand for commercial refrigeration is attributed to increase in need for frozen & chilled products among consumers due to change in lifestyle and rapid urbanization. In addition, rapid growth in the organized retail sector, such as increase in number of hypermarkets and supermarkets, boosts the overall sales of commercial refrigerators, thereby augmenting the growth of the market. However, need for frequent maintenance and potential technical issues arising due to lack of proper maintenance act as the major restraints of the global commercial refrigeration market. Conversely, advancements in commercial refrigerators such as integration of artificial intelligence

coupled with rise in trend of automation and surge in number of quick service restaurants in emerging economies are expected to provide remunerative opportunities for the expansion of the global market during the forecast period.

The global commercial refrigeration market is segmented into product, end user, and region. Depending on product, the market is categorized into deep freezers, bottle coolers, storage water coolers, commercial kitchen refrigeration, medical refrigeration, chest refrigeration, and others. The others subsegment includes ice cubes, bottled water dispenser, visi coolers, refrigerated display cases, and beer dispensers.
