## **Abstracts**

Drone camera is a type of device designed to be installed in a drone. Drones equipped with camera can perform numerous operations such as capturing photos & videos while in operation, surveillance, and thermal imaging. Increase in application of drones in the defense sector is expected to provide remunerative opportunities for the expansion of the market across the globe.

The global drone camera market is a dynamic market, and is expected to witness high growth during the forecast period. The development of new and diversified technologies is further anticipated to provide potential growth opportunities for the global market.

The factors such as introduction of technologically advanced products and promising growth rate of the drone market act as the key driving forces of the global drone camera market. However, privacy & security concerns and the availability of high-resolution satellite imagery are the factors that restrain the growth of the drone camera market.
