## **Abstracts**

Drone service, also known as unmanned aerial vehicle (UAV) service, is a rapidly growing market for services centered on flying robots that can be commanded remotely or flown independently utilizing software-controlled flight plans in their embedded devices. Commercial drone services or Drones as a Service, are being developed to assist industries such as agriculture, construction, search and rescue, package delivery, industrial inspection, insurance, and videography with tasks such as collecting imagery and measurements and managing or broadcasting events.

In the military, UAV applications were created as espionage or reconnaissance vehicles to be utilized during combat. However, the development of this type of aircraft has progressed to include professional videography, surveying, construction, inspection,

traffic management, and last-mile deliveries in commercial, civil, and consumer environments. Drone services are also used for firefighting and police work, as well as various types of home monitoring.

The drone service market is segmented into type, duration of service, application, and solution. By type, it is further divided into drone platform services, drone maintenance, repair, and overhaul (MRO) services, and drone training & education services. By duration of service, the drone service market is segmented into short-duration services and long-duration services. By application, the market is segmented into aerial photography & remote sensing, data acquisition & analytics, mapping & surveying, modelling, disaster risk management & mitigation, inspection & environmental monitoring, and others. By solution, the drone service market is bifurcated into enterprise and point. Region-wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
