Abstracts

Edible cutlery are tableware cutlery items such as drinkware, plates, glasses, and other cutlery that are edible. Edible cutlery can be made using sliced celery, which can be used as chopsticks, and it can also be used as a spoon to scoop foods such as cream cheese and dips. Moreover, cabbage leaves are used as a spoon, while sharpened carrot sticks can be used as a fork or skewer. Apart from these, edible bowls and plates are prepared with large leaves of trees such as banana which are considered herbal and beneficial to health. In addition, edible cutlery can be made by chocolates and other flavored fruits or creams.

Edible cutleries such as bowls, cups, platters, and plates that prepared using sugar paste have been in use since centuries in various parts of world. Furthermore, in countries such as India, Myanmar, Indonesia, Nepal, Pakistan, and Sri Lanka, the leaves of banana and almond are used to make bowls and plates. These are considered to exert various health benefits such as they aid in weight loss and improve digestive system & heart health.

Numerous positive facts are associated with edible cutlery that make them a better product over traditional plastic-made products. Considering climate emergency and environment-friendly trends, edible cutlery are attracting a large consumer base, as they limit the use of plastic and are completely biodegradable. In addition, edible cutlery that are made by natural process, flours, fruits, and herbal leaves contain fiber, protein, iron, calcium, and other useful nutrients, which make them a healthy alternative for plastic

cutlery. As plastic cutleries are said to be the major cause for the spread of cancer and other diseases, the adoption of edible cutlery is increasing at a significant rate.

Rise in production of cutlery using organic & natural flours and herbal leaves act as a major driver of the global edible cutlery market. Furthermore, surge in vegan population fuels the demand for natural and organic products, which, in turn, is anticipated to augment the growth of the global market during the forecast period.
