Electrosurgery Devices Market Overview:

Electrosurgery refers to the use of high-frequency electric current during surgical procedures for coagulation, fulguration as well as cutting of tissues. Electrosurgery devices enable the surgeons to make precise cuts with controlled blood loss.

The global electrosurgery devices market was valued at \$2,591 million in 2017 and is projected to reach \$3,784 million at a CAGR of 4.8% from 2018 to 2025. The growth of the electrosurgery devices market is driven by rise in number of surgical procedures globally, large pool of geriatric population, increase in prevalence of chronic diseases,

and technological advancements. However, implementation of stringent government regulations for product approval is expected to hamper the market growth.

The electrosurgery devices market is segmented based on product, application, and region. Based on product, the market is categorized into electrosurgery generators, electrosurgery instruments & accessories, and argon & smoke management systems. The electrosurgery instruments & accessories segment is further bifurcated into electrosurgery equipment (bipolar electrosurgery instruments and monopolar electrosurgery instruments) and electrosurgery accessories (patient return electrodes, cords, cables, adapters, and others). Applications covered in the study include general surgery, gynecology surgery, urologic surgery, orthopedic surgery, cardiovascular surgery, cosmetic surgery, neurosurgery, and others. Based on region, North America (U.S., Canada, and Mexico), Europe (Germany, France, the U.K., and rest of Europe), Asia-Pacific (Japan, China, India, and rest of Asia-Pacific), and LAMEA (Latin America, Middle East, and Africa).
