Abstracts

The global energy drinks market size was valued at \$53.01 billion in 2018, and is expected to grow at a CAGR of 7.20% to reach \$86.01 billion by 2026.

Energy drinks are beverages that contain caffeine, taurine, vitamins, and other stimulants, and are marketed as products that boost mental alertness and physical stamina. These drinks may or may not be carbonated. They differ from sports drink, which are used to replace electrolytes and water during or after physical activity. In addition, they are distinguished from tea and coffee, which are brewed, contain lesser ingredients, and may be decaffeinated. The manufacturers of energy drinks claim that their products improve energy levels.

Surge in product consumption by working individuals to maintain a healthy lifestyle, increase in consciousness toward healthy diet, rise in intake among sports athletes & working individuals to maintain nutritional balance in their body, and upsurge in disposable income are expected to propel the global energy drinks market. Moreover, change in consumer preference toward consumption of beverages and lifestyle is expected to create many opportunities in global energy drinks market during the forecast period. However, caffeine overdose may cause hypertension, nausea, restlessness, and other associated health risks that may limit the energy drinks industry growth during the forecast period. Furthermore, implementation of stringent government regulations toward increased consumption of caffeine content in energy drinks hinders the growth of the market.

The global energy drinks market has been segmented based on type, end user, and region. Based on type, the market is divided into alcoholic and non-alcoholic.
