## **Abstracts**

The Europe histopathology services market was valued at \$5,583 million in 2016, and is expected to reach \$8,766 million by 2023, growing at a CAGR of 6.6% from 2017 to 2023.

Histopathology is a branch of pathology, which deals with the microscopic analysis of biological tissues to detect the presence of diseased cells/tissues. It involves the study of infinitesimal changes/aberrations in tissues that are caused due to some diseases. Histopathology tests are conducted in histopathology laboratories, wherein a pathologist studies changes or abnormalities in tissues caused by a disease.

The growth of the Europe histopathology services market is driven by increase in prevalence of cancer & other chronic disorders, rapid surge in geriatric population in Europe, and rise in public awareness for disease screening. However, limitations of histopathology and dearth in number pathologists & medical laboratory scientists in the UK restrain the growth of the market. Conversely, increase in demand for personalized medicine is expected to provide potential opportunities for market expansion during the forecast period.

The report segments the Europe histopathology services market based on type of examination and country. Depending on type of examination, the market is fragmented into surgical specimen, gastrointestinal biopsy, breast biopsy, lung biopsy, biopsy of

gynecological cancers, renal biopsy, pancreatic biopsy, skin tissue biopsy, liver biopsy, nerve biopsy, testicular biopsy, and others. On the basis of country, it is analyzed across Germany, France, the UK, Spain, and rest of Europe.
