Abstracts

The Europe and Middle East industrial & commercial LED lighting market size was valued at \$6.03 billion in 2018, and is projected to reach \$21.96 billion by 2026, registering a CAGR of 17.2% from 2019 to 2026.

A light-emitting diode (LED) is a semiconductor light source that converts electrical energy directly into light energy. These devices are often used in lamps as a replacement of incandescent light sources. Some LEDs are called infrared-emitting diodes (IRED), emitting infrared (IR) energy, which is greater than or equal to 830 nm. An LED consists of two elements of processed material called N-type semiconductors and P-type semiconductors, which are placed in direct contact to form a region called P–N junction.

Factors such as high demand for cost-effective and energy-saving LED lighting, increase in government initiatives toward LED adoption, and surge in need to replace traditional lighting system are expected to fuel growth of the industrial and commercial LED lighting market in Europe and Middle East. However, high initial cost of LED lighting system and voltage sensitivity & temperature dependence are expected to hinder the market growth. Conversely, surge in need for smart lighting is expected to offer lucrative opportunities for the market in Europe and Middle East.

The EME industrial & commercial LED lighting market is analyzed by product type, application, and country. By product type, the market is analyzed across LED Lamps
