Abstracts

The European electrosurgical devices market size is estimated to grow at a CAGR of 7.2% during the forecast period. The growth of the market can be attributed to the surge in rate of chronic disorders, aging population, and volume of surgical procedures. Furthermore, persistent R&D in this field for the technological advancement in the electrosurgery devices and rise in volume of minimally invasive surgeries and aesthetic & cosmetic surgical procedures are anticipated to create new opportunities during the forecast period. However, pitfalls such as stringent government regulations limit the European electrosurgical devices market.
