## **Abstracts**

### **Federated Learning Solutions Market**

The federated learning solutions market was valued at \$125.9 million in 2023 and is projected to reach \$301.9 million by 2032, growing at a CAGR of 10.2% from 2024 to 2032.

A federated learning solution is a decentralized method that enables the collaboration of different servers or devices for the training of ML models. This approach prioritizes security and data privacy by preventing the transfer of data among the collaborated devices. Therefore, a federated learning solution is a form of distributed ML in which the data remains with the local devices and only the updates of the training are communicated back to the central server.

The ability of federated learning solutions to secure the data within local devices is a

key driver of the market as it allows organizations to develop AI models and prevent leaks or misuse of sensitive information. In addition, several attributes of federated learning solutions such as scalability, reduced latency, and cost-efficiency augment the development of the market significantly. Currently, the adoption of federated learning solutions in the healthcare and life sciences industry is trending for the development of diagnostic models. The solutions are being used to train models from data generated through clinical trials and remote patient monitoring devices to help healthcare providers create personalized treatments.

However, aggregation of data from multiple devices results in slow convergence and possible model inaccuracy, which hampers the development of the market. Moreover, federated learning is currently at a nascent stage; therefore, there is a lack of standardization across the framework that is restraining the market growth significantly. Contrarily, the potential of federated learning solutions to develop distributed cybersecurity systems and enhance the ability to detect suspicious activity across various industries is projected to open new avenues for the market. According to the 2024 Global Anti-scam Alliance report, scammers extracted around \$1.03 trillion globally in 2023, a figure that is equivalent to the GDP of some nations. This highlights the importance of federated learning solutions in detecting emerging cyber threats and ensuring the privacy of data for organizations.
