Abstracts

A field programmable gate array (FPGA) is an integrated circuit that can be programmed later in the field after production. Field programmable gate arrays are similar to programmable read-only memory (PROM); however, they possess wider and vast potential.

FPGA is flexible, involves reduced development time, and requires low on non-recurrent engineering (NRE) cost. These factors boost the market growth. There is a great potential for reduction of cost and development of security level using the field programmable gate array, which is expected to provide lucrative opportunity to the market. However, these arrays are slower than application specific integrated circuits (ASIC) or other equivalent ICs as well as expensive. The design process is complex, which limits the market growth.

The market for global field programmable gate array is segmented into technology, application, type, and region. The technology segment covered in this study includes EEPROM, Antifuse, SRAM, Flash, and others (EPROM and PROM).

The application segment is divided into data processing, consumer electronics, industrial, military & aerospace, automotive, telecom, and others. Based on type, it is classified into high-end, mid-end, and low-end FPGA. Based on regional study, the

market is analyzed across North America, Europe, Asia-Pacific, and LAMEA. The key players mentioned in the report are Achronix Semiconductor Corporation, Cobham PLC, Intel Corporation, Taiwan Semiconductor Manufacturing Company Limited (TSMC), United Microelectronics Corporation (UMC), Cypress Semiconductors Corporation, Lattice Semiconductor, Microsemi Corporation, QuickLogic Corporation, and Xilinx Inc.
