## **Abstracts**

The global gastroparesis market was valued at \$4,667 million in 2016, and is projected to reach \$6,486 million at a CAGR of 4.7% from 2017 to 2023. Gastroparesis is a medical condition of the stomach, which affects the normal spontaneous movement of the muscles of the stomach. It restricts the normal digestion, causes vomiting, and problems related with blood sugar levels & nutrition. Various medications or drugs are prescribed to treat gastroparesis, such as reglan, erythromycin, antiemetics, and others. Rise in number of surgeries, which leads to postsurgical gastroparesis conditions is the major factor that contributes to the growth of the gastroparesis drugs market. Moreover, rise in diabetic population, increase in geriatric population, and introduction of novel drugs to control symptoms such as nausea and vomiting fuel the market growth. However, side effects related to gastroparesis drugs, time-consuming regulatory process for the approval of drugs, and complications in gastroparesis diagnosis hamper the growth of the market. Conversely, surge in demand for the development of user-friendly drugs, rise in healthcare infrastructure, and creative marketing initiatives by key vendors in emerging countries are expected to provide lucrative opportunities for the market expansion during the forecast period.

The global gastroparesis drugs market is segmented on the basis of drug class, disease type, distribution channel, and region. Based on drug class, the market is divided into prokinetic agents, antiemetic agents, and botulinum toxin injections. By disease type, it

is classified into diabetic gastroparesis, idiopathic gastroparesis, postsurgical gastroparesis, and others. Depending on distribution channel, it is categorized into hospitals, pharmacies, clinics, and e-commerce. Based on region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
