## **Abstracts**

Disposable gloves are primarily used across health care and food industry, as a protection tool in order to avoid cross- infection between caregivers and patients. Over time, various variants of disposable gloves have been developed such as natural rubber, nitrile, vinyl and neoprene. Each of the variants renders unique benefits over conventional gloves; this renders wide application over a range of industries such as food service, clean room, industrial application among others. For instance, nitrile gloves are more puncture resistant, friction less, with long shelf life than latex gloves. The total revenue value of the disposable gloves market in 2013 was at \$5.2 billion. Increasing incidence of pandemic diseases such as swine flu (H1N1 pandemic) and a resultant need for infection prevention/control aids such as 'disposable gloves' drive the growth of global disposable gloves market volume (billion gloves). Thus, the global disposable gloves market is estimated to grow at CAGR of 6.2% over the period 2014-2020 and is expected to be valued at \$7.9 billion in 2020.

The global disposable gloves product market can also be segmented into powdered and non-powdered disposable gloves. Powdered gloves are widely used in the market owing to their high sterility, disposable nature and affordable cost. Owing to such benefits and consequent high usage/adoption rate by customers, powdered gloves garnered high volume (billion gloves) and ~71.5% of the market in 2013. On the basis of geography, the global disposable gloves market is segmented into North America, Europe, Asia Pacific and Rest of World. On account of higher purchasing power and

stringent healthcare regulations in the developed regions, such regions have garnered majority market share of the global disposable gloves market. As elaborated earlier, many companies aim to develop and market newer variants of disposable gloves; for instance, Dynarex Corporation launched 'black nitrile exam gloves' that are non-sterile, powder free and ambidextrous and commonly used across range of industries. Companies profiled in the report are Ansell Healthcare, Hartalega Holdings Berhad, Supermax Corporation Berhad, Kossan Rubber industries Ltd, Rubberex, Top Glove Corporation Berhad, Adventa Berhad, Cardinal Health, Inc., Dynarex Corporation.
