## **Abstracts**

Reservoir is a subsurface pool of hydrocarbons occurring in porous or fractured rock formations, which are both conventional and unconventional. Conventional reservoir hydrocarbons, such as oil and gas, that are trapped by overlying rock formations are found easily by well drilling, whereas unconventional reservoir hydrocarbons are trapped in rocks and have low permeability, and thus require special operation strategy to recover. Some of the finest examples of unconventional reservoirs are oil sand, gas hydrate deposit, tight gas sand, heavy hydrocarbon, bitumen, and others. Reservoir analysis plays a significant role in determining fluid property, pressure in well, and flow rates of hydrocarbon. Moreover, they provide necessary inputs pertaining to design, engineering, construction, and completion of oil & gas projects.

Upsurge in demand for energy worldwide is expected to boost the growth of the global reservoir analysis market during the forecast period. Furthermore, increase in focus on mature oil & gas fields and developments across oil & gas sector drive the market across different regions. However, high cost, risk of operation, and complexity pertaining to reservoir analysis are anticipated to hamper the market during the forecast period. Conversely, development in hydraulic fracturing technology and enhanced spending capacity on development & exploration tasks are expected to create new opportunities for the global reservoir analysis market.

The global reservoir analysis market is segmented based on service, end user, and geography. Depending on service, it is classified as reservoir simulation & geo-

modeling, reservoir sampling services, and data acquisition & monitoring. By end user, it is categorized as onshore and offshore. The market is analyzed based on geography into North America, Europe, Asia-Pacific, and LAMEA.
