Abstracts

The global solar encapsulation industry is expected to reach \$4,231 million by 2022 from \$915 million in 2015, growing at a CAGR of 23.1% from 2016 to 2022. A solar encapsulant is used to provide adhesion between the top and the rear surface of the PV solar module to protect the PV modules from elevated temperature and high PV exposure. In addition, the encapsulating materials should have efficient transmission and reflection properties coupled with excellent impact and water resistance.
