Abstracts

The global graphene market size valued at \$87.5 million in 2019, and is projected to reach \$876.8 million by 2027, growing at a CAGR% of 40.2% from 2020 to 2027.

Graphene is an incredibly thin, heavy substance composed of a single layer of carbon atoms. This has many uses such as metrology, biotechnology, electronic and photonic high frequency transistors. Graphene can withstand high electric current density and is impermeable to any heat. Graphene is hundredfold stronger than steel. This is a strong electric and heat conductor. In the most important industries, such as oil, composites, and electronics, high electronic mobility and permeability like a quality rendered graphene is used significantly.

The global graphene market is driven primarily by growing demand for graphene in the electronic sector. In addition, the rising use of graphene in the energy industry is expected to boost the size of the market in the coming years. The growth is due to the high quality of electrical mobility and permeability. However, stringent health-related rules and regulations may restrict business development. Nonetheless, ongoing research and development activities relating to graphene are expected over the next

few years to generate new prospects for the major manufacturers in the market.

The global graphene market is segmented based on type, application, and region. By type, the market is classified into mono-layer & bi-layer graphene, few layer graphene (FLG), graphene oxide (GO), and graphene nano platelets (GNP). According to application, it is divided into RFID, composites, sensors, R&D, energy storage, functional ink, and polymer additives, tire, coatings, and others. Based on region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
