Abstracts

High-voltage hybrid vehicle refers to the type of hybrid vehicle, which has operating voltage range more than 60V. High voltage hybrid vehicles are driven through a conventional IC engine and an electric drive system with high operating range. Under the scope of the research study, vehicles with high-voltage hybrid systems are designed either as full hybrids or plug-in hybrids. High-voltage full hybrid vehicles charge the battery through its internal system, whereas high-voltage plug-in hybrid vehicle are with larger battery size can be recharged through the external electric power grid. High-voltage hybrid vehicles mainly deal with low-carbon foot prints along with cost-effective operations. Furthermore, automobile manufacturers are inclined toward vehicle electrification due to increase in vehicle emission regulations.

The report on the global high-voltage hybrid vehicle market focuses on the current market trends and future growth opportunities of various vehicle types such as passenger cars, buses, and trucks. In addition, the report provides information on propulsion such as hybrid electric vehicle (HEV) and plug-in hybrid electric vehicle (PHEV). Moreover, it focuses on various voltage, including less than 340 volts, 350 to 650 volts, and 650 volts and above. In addition, it analyzes the current trends of high-voltage hybrid vehicles across different regions such as North America, Europe, Asia-Pacific, and LAMEA.

The key players analyzed in the global high-voltage hybrid vehicle market include BMW Group, BYD Company Limited, Daimler AG, Ford Motor Company, Groupe Renault, Honda Motor Co., Ltd., Kia Corporation, Toyota Motor Corporation, Volkswagen AG, and Volvo Car Corporation.
