Abstracts

The global home medical equipment market was valued at \$26,629 million in 2018, and is estimated to reach \$41,259 million by 2026, registering a CAGR of 5.6% from 2019 to 2026. Home medical equipment are medical devices that offer safe, convenient, cost-effective, and suitable treatment to the patients. Home medical equipment comprises of various devices that can be easily accessed by the patients or caregivers at home. These include blood glucose monitors, blood pressure monitors, Holter monitors, automated external defibrillators, and several others. The homecare equipment makes it

easier for the patients to carry their day to day activities smoothly without the need of visiting hospitals and clinics regularly. This again saves their time and are proven to be cost effective. Further, medical equipment used for mobility assistance are widely being used by the elderly population as well as patients with certain difficulty in mobility. In addition, due to an increase in incidence of asthma and chronic obstructive pulmonary disease (COPD), oxygen-related products in home medical equipment are gaining considerable traction.

The growth of the global home medical equipment market is driven by the increase in incidence of chronic diseases and rise in geriatric population. Furthermore, cost-effectiveness of home medical devices and technological advancements are expected to fuel the market growth. However, surge in concerns related to patient safety and difficulty in adapting to medical devices restrain the growth. The growth potential in the emerging economies of Asia-Pacific is expected to provide numerous opportunities for market expansion during the forecast period.
