The global HVAC control market size was valued at \$14,559.0 million in 2019, and is projected to reach \$19,939.4 million by 2027, registering a CAGR of 5.7% from 2020 to 2027. HVAC control are installed to regulate the operation of a heating, ventilating, and air conditioning system. The sensing device and other equipment are utilized to compare the actual state such as humidity or temperature with a target state.

HVAC control consists of devices that control operations of heating, ventilation, and air conditioning equipment. HVAC control is installed in various industry verticals such as industrial, enterprises, retail, hospitality, and residential. Development of smart cities in emerging countries and government initiatives are expected to boost the building automation & controls industry, which, in turn, propels the HVAC controller market growth.

Emergence of IoT-enabled HVAC systems, growth in the construction market, and rise in demand for building automation systems (BASs) drive the market growth. However, fluctuation in raw material prices may hamper the market growth. Furthermore, rise in demand for cloud computing in HVAC offers lucrative opportunities for growth of the HVAC control market.

The global HVAC control market is segmented on the basis of system, implementation type, end user, and region. By system, the market is categorized into temperature control systems, ventilation control systems, humidity control systems, and integrated control systems. Depending on implementation type, it is fragmented into new construction and retrofit. On the basis of end user, it is categorized into residential, commercial, and industrial.
