Abstracts

An ice maker which is also known as ice generator or ice machine is an appliance that generates ice artificially. Ice makers consists of four types including modular ice maker, undercounter ice maker, countertop ice maker and ice dispenser.

This appliance is widely adopted in food service industry, food processing industry, healthcare, retail outlets and others for preparation ice. Rise in business-related travel and increase in number of food joints such as hotels & restaurants fuel the growth of the hospitality industry, which in turn drives the demand for ice maker in terms of value sales.

Increase in the demand for ice maker from food processing industry drives the growth of the market. Moreover, growth of organized retail outlets further boosts the growth of the ice maker market in terms of value sales. Furthermore, rising innovation in ice maker propels the growth of the ice maker market.

However, high regular maintenance and negative impact of ice maker on the environment is expected to restrict the market growth in terms of value sales during the forecast period. Nevertheless, innovations in ice makers and surge in energy efficient & cost-effective ice maker is likely to bring new opportunities for the ice maker market during the forecast period in terms of value sales.

The outbreak of COVID-19 has disrupted the ice maker market in terms of value sales. According to the Centre for Evidence-Based Medicine, meat packing industry was depicted as a high-risk industry for covid 19 spread and thus, it has contributed to the upsurge of the covid 19 cases. Thus, this has interrupted the operation of the meat packing industry which has hampered the demand for ice from this industry affecting the growth of ice makers in the year 2020.
