Abstracts

The India bitumen market was valued at \$2.8 billion in 2018, and is projected to reach \$3.6 billion by 2026, growing at a CAGR of 2.8% from 2019 to 2026.

Bitumen is an oil-based substance and semi-solid hydrocarbon product produced by removing the lighter fractions (such as liquid petroleum gas, petrol, and diesel) from heavy crude oil during the refining process. Composition of bitumen includes carbon (87-92%), hydrogen (6-8%), sulphur (~5%), nitrogen (1%), and oxygen (1%). It possesses physical properties such as adhesion, water resistance, hardness, and viscosity.

Increase in road construction activities fuels the demand for bitumen. Bitumen is processed into asphalt for road construction. Asphalt is a mixture of rock aggregates and bitumen. Bitumen serves as a binding agent and improves the stability of asphalt. Depending on the type of bitumen or composition of the mixture used, asphalt roads can be made suitable for regions with different climatic conditions or various levels of operational demands. Asphalt is also used for airport runways, parking decks, and working areas in ports. In addition, India's recent passed budget includes expenditure on development of National Highways, including projects relating to expressways, two-laning of highways, under the National Highways Development Project, six-laning of crowded stretches of the Golden Quadrilateral, a special program for the development

of road connectivity in Naxal affected areas, development of Vijayawada—Ranchi road, and for providing last mile connectivity, which is anticipated to drive the growth of India bitumen market. Furthermore, bitumen adhesive is widely used in the construction industry for roofs. It is a cold applied adhesive for bonding bituminous roofing felts to asphalt, felt, metal, and concrete. Bitumen adhesive has physical properties that includes toughness, flexibility, and forms adhesive and cohesive film and provides good UV resistance. Owing to growth in construction industry due to rapid urbanization and launch of government initiatives such as “Housing for All” that includes construction of houses for urban poor is expected to drive the growth of the bitumen market across the country.

However, human health & environmental issues associated with bitumen, fluctuating international crude oil prices, and increase in use of an alternative for bitumen such as concrete in roadway construction application restrain the growth of the market across the India. Moreover, development of bio-based bitumen and EME (Enrob?s ? Module Elev?) binder is anticipated to provide lucrative opportunities for further development of the market.

The India bitumen market covered in the study includes paving grade bitumen, oxidized bitumen, polymer modified bitumen, and bitumen emulsions. By end-use industry, the market is classified into road construction (airports & runways and highways & express ways), waterproofing, and others. Region-wise, it is analyzed across North India (Uttar Pradesh, Rajasthan, Punjab, Haryana, rest of North India (Himachal Pradesh, Uttarakhand, Chandigarh, and Delhi)), East India (Bihar, Jharkhand, West Bengal, Odisha, and Andaman & Nicobar), Northeast India (Arunachal Pradesh, Assam, Tripura, Meghalaya, and rest of Northeast (Sikkim, Nagaland, and Mizoram)), and South India (Tamil Nadu, Karnataka, Andhra Pradesh, Telangana, Kerala, and rest of South India (Lakshadweep and Puducherry)), and West India (Maharashtra, Gujarat, Madhya Pradesh, Chhattisgarh, rest of West India (Goa, Dadra & Nagar Haveli, and Daman & Diu)).
