Abstracts

The India HDPE Pipes Market for FTTx Industry accounted for \$99.9 million in 2018, and is anticipated to reach \$233.5 million by 2026, registering a CAGR of 11.2% from 2019 to 2026. High density polyethylene (HDPE) pipes are made from graded raw materials such as PE 63, PE 80, and PE 100. HDPE pipes are one of the most sought-after mediums of conveying and transporting chemicals, water, and gases. One of the major advantages of utilizing HDPE pipes is that they are 6-8 times lighter than conventional cast iron and galvanized iron pipes.

The market is expected to witness a substantial growth. The upsurge in urbanization is expected to increase the demand for telecommunication connectivity, resulting in the growth in the requirement of HDPE pipes. Furthermore, intense competition in the telecommunication sector is enforcing players to increase their existing infrastructure capacity which, in turn, boosts the demand for HDPE pipe or duct. However, volatile raw material prices attributed to fluctuation in prices of crude oil is expected to hamper the market growth.

KEY BENEFITS FOR STAKEHOLDERS

The report provides an extensive qualitative and quantitative analysis of the

current trends and future estimations of the market from 2019 to 2026 to determine the prevailing opportunities

A comprehensive analysis of the factors that drive and restrict the growth of the market is provided

The market size is provided in terms of revenue

Porter's five forces analysis helps analyze the potential of the buyers & suppliers and the competitive scenario of the industry for strategy building.

The report provides extensive qualitative insights on the significant segments and regions exhibiting favorable market growth
