Abstracts

The India heat exchangers market accounted for \$454.4 million in 2018, and is anticipated to reach \$890.0 million by 2026, registering a CAGR of 8.6% from 2019 to 2026. Heat exchanger is a system designed to efficiently transfer energy between two or more fluids.

The production of heat exchangers is a highly labor-intensive process, attributable to the long welding hours. Thus, heat exchangers are preferably manufactured in India, owing to the availability of cheap labor, which is a major factor that drives the growth of the India heat exchangers market. Only the standard products are manufactured in India as of now; however, in the future, custom-made heat exchangers are anticipated to be produced. However, high cost of raw materials used for the manufacture of shell & tube heat exchangers is expected to inhibit the growth of the market.

The India heat exchangers market is segmented based on type, material of construction, and end-user industry. Depending on type, the market is categorized into shell & tube, plate & frame, air cooled, microchannel, and others. The materials of construction covered in the study include carbon steel, stainless steel, nickel, and

others. On the basis of end-user industry, the market is classified into chemical, petrochemical, oil & gas, HVACR, food & beverage, power generation, and others.
