Abstracts

The industrial adhesives market was valued at \$XX billion in 2019, and is projected to reach \$XX billion by 2027, growing at a CAGR of XX% from 2020 to 2027.

Industrial adhesives can be defined as inorganic or organic chemical compounds that are utilized to attach components or help in manufacturing of components and materials.

There is a significant increase in demand for adhesives from end-use industries such as medical, packaging, and others. However, less demand for automobiles prior to the COVID-19 outbreak and the volatility in the price of raw materials are expected to hinder the market growth. In addition, decreased consumer spending, owing to the COVID-19 pandemic has hindered the electronics sector, which consequently decreased the demand for adhesives. On the contrary, increase in participation of developing countries in the aerospace sector is expected to boost the growth of the industrial adhesives market during the forecast period.

The market is segmented on the basis of composition, type, end-use industry, and

region. By composition, the market is divided into polyurethane, epoxy, acrylic, and others. On the basis of type, the market is classified into water-based adhesives, solvent-based adhesives, hot-melt adhesives, and others. On the basis of end-use industry, the market is categorized into packaging industry, construction industry, automotive industry, electrical & electronics, and others. By region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
