The global Internet of Vehicle market was valued at \$66,075 million in 2017, and is estimated to reach \$208,107 million by 2024, growing at a CAGR of 18.00% from 2018 to 2024. Internet of Vehicles refers to the automation of vehicles, which involves the implementations of IoT technologies into vehicles. The internet of vehicle market growth is expected to witness high demand, owing to rise in technological upgrades in automotive industry, rising internet penetration, introduction of Logistics4.0, and increase in awareness about safety measures across the globe. The Internet of Vehicles (IoV) technology is a pioneering technological innovation that is expected to revolutionize the automotive market. IoV refers to the technology that has various dynamics and communicates between public and vehicle networks using V2V (vehicle-to-vehicle), V2R (vehicle-to-road), V2H (vehicle-to-human), and V2S (vehicle-to-sensor) interactions.

Internet of vehicle is a certain convergence of mobile internet and the Internet of things. It includes the presence of internet in the moving vehicles to extract information about the location, speed, distance, or mishaps on the roads. It is a converged technology that encompasses information, communication, environmental protection, energy conservation, and safety. Internet of Vehicles helps the driver to know the area and avoid collision with the nearby passing vehicles, and even control the speed accordingly. The technology is used for personal as well as business vehicle use. In case of business use, internet of vehicles is the ultimate solution to track the employee

and to assure safety of the business asset.

The North America internet of vehicle market is expected to register the highest CAGR during the forecast period, due to an early adoption of IoV, and continuous launch of new and improved technologies in the region.
