Abstracts

The global jackhammer market size was valued at \$202.8 million in 2018, and is projected to reach \$361.2 million by 2026, growing at a CAGR of 7.8% from 2019 to 2026. Jackhammer is equipment that breaks the rock to a certain depth. It is widely used in creating quarries and open-pit mines where mining activity can be initiated further. In addition, it is used in construction activities such as demolishing of roads and concrete pavement. The jackhammer acts as a reliable means to carry mining and construction operations. The initial phase of mining and construction requires the digging of the surface to facilitate the deep drilling process and further construction work.

Increase in investments in the mining industries and growth in construction of roads, tunnels, and railways tracks drives the market growth. However, government regulations related to the mining operations restrain the market growth. Furthermore, new technical advancement in jackhammers offer lucrative growth opportunities for the market players.

The global jackhammer market is segmented into type, application, and region. Depending on type, the market is divided into pneumatic, electric, and hydraulic. On the basis of application, it is categorized into mining, construction, tunneling, and well drilling. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA. The major players operating in the global market have adopted key strategies such as acquisitions, and product launch to strengthen their market outreach and sustain the stiff competition in the market.
