Abstracts

The global margarine market was valued at \$22.1 billion in 2023, and is projected to reach \$29.2 billion by 2033, growing at a CAGR of 2.9% from 2024 to 2033.

Margarine is a spreadable, butter-like product commonly used as a substitute for butter in cooking, baking, and as a table spread. It is typically made from vegetable oils, such as soybean, palm, or canola oil, which are hydrogenated to solidify the product. Margarine is created through a process called hydrogenation, where unsaturated fats in the oils are converted into saturated fats, resulting in a semi-solid consistency at room temperature. It is often fortified with vitamins, such as vitamins A and D, to mimic the nutritional profile of butter.

The growth of the margarine market is driven by versatility of margarine in various culinary applications, including baking, cooking, and spreading, which makes it an attractive option for health-conscious consumers seeking to maintain a balanced diet without compromising on taste or texture. Moreover, rise in trend toward consuming plant-based and healthier alternatives has significantly boosted the demand for margarine, owing to changes in consumer preferences toward healthier dietary choices. As health consciousness grows, consumers are increasingly seeking alternatives to traditional butter and spreads that are lower in saturated fats and trans fats. Margarine, particularly plant-based varieties, fulfills the demand by offering

products with reduced or zero trans fats and cholesterol.

However, stringent regulations regarding trans fats pose challenges on the global margarine market growth. Many governments globally have implemented regulations limiting the permissible levels of trans fats in food products due to their adverse health effects, particularly on cardiovascular health. Contrarily, expansion of product portfolios with innovative flavors and textures in the global margarine market presents numerous opportunities for manufacturers to diversify offerings and cater to evolving consumer preferences. By introduction of new and exciting flavors such as herb-infused or spicy varieties and experimenting with textures such as whipped or spreadable margarine, companies attract a wider consumer base, including millennials and Generation Z. For instance, in February 2023, Unilever, a major player in the food and beverage industry, announced the introduction of a new range of margarine water products to offer a healthier alternative to traditional margarine, featuring lower fat and calorie content.

Segmentation Overview

The margarine market is segmented by type, end user, distribution channel, and region. Depending on the type, the market is divided into hard, soft, and liquid. As per end user, it is categorized into household consumers, HoReCa, and industrial. By distribution channel, the market is segregated into supermarkets/hypermarkets, specialty stores, convenience stores, online retailers, and others. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

Key Findings

By type, the soft segment held the highest market share in 2023.

Depending on end user, the household consumers segment accounted for the largest share in the market in 2023.

According to distribution channel, the supermarkets/hypermarkets segment gained the maximum market share in 2023.

Region wise, Europe dominated the margarine market in 2023.
