## **Abstracts**

Medical devices outsourcing is the process of contracting a third party for various business purposes such as manufacturing, product designing, prototyping, and supply chain management. This process enables the original equipment manufacturers (OEMs) to reduce the labor cost and production time-scale, thus increasing its demand in the market.

The global medical device outsourcing market generated \$44,326 million in 2016, and is projected to reach \$83,952 million by 2023, registering a CAGR of 9.5% during the study period. The increase in prices of medical devices, growth in geriatric population, and rise in demand for efficient disease screening and detection techniques, are the major factors that drive the growth of the medical devices outsourcing market. However, threat of loss of confidential information restraints the market growth.
