## **Abstracts**

Insulating panels are high-performance building materials used in the construction of walls, roof, floors, cold rooms, and refrigerated vehicles bodies. The insulating panels replace the conventional stick frame construction. These panels are manufactured by sandwiching a rigid foam insulation material, such as polyurethane and polystyrene, between two panels of the wooden structure. The lamination process is done using industrial adhesive, which helps to bind the rigid foam insulation material to the wooden structure. Insulating panels offer advantages such as better energy management, improved durability, economical, faster construction, fire resistance, and acoustical & vibration control.

Surge in urbanization and globalization is a major factor that drives the demand for Mexican insulated panels market for prefabricated covers. Furthermore, increase in requirement for refrigerated vehicles and cold storage containers utilized for shipping food fueled the demand for insulated panels for prefabricated covers. However, vulnerability to damage by insect nests and moisture that may cause leaks may hinder the market growth. The eco-friendly nature of insulating panels is expected to provide growth opportunities for the insulated panels market for prefabricated covers.

The Mexican insulated panels market for prefabricated covers is segmented on the basis of foam type, skin material, end-user industry, and region. Foam types studied in this market are polyurethane foam, polystyrene, and others. Based on skin materials,

the market is divided into steel-steel, steel-cardboard, steel-vinyl ester, cardboard-cardboard, and others. The end-user industries analyzed in this report are construction and cold storage.
