Abstracts

The global mineral wool market was valued at \$9.9 billion in 2018, and is projected to reach \$16.0 billion by 2026, growing at a CAGR of 6.3% from 2019 to 2026.

Mineral wool is non-metallic and inorganic products manufactured with the blend of material like stone and silica. Glass wool, rock wool, and others are some of the prominent types of the mineral wool available in the market. It is also produced through used material and therefore it is less expensive as well as environmentally friendly in nature. Mineral wool exhibits excellent thermal and acoustic insulating properties that favor its use in industrial applications.

Factors that are expected to fuel the growth of the global mineral wool market are an increase in demand from the automotive industry in response to demand for lightweight materials, excellent resistance & durability, high-temperature resistance, enhanced fire protection, and limiting your environmental impact. Additionally, the introduction of various policies and regulations supporting the demand for insulation in residential and commercial buildings are some of the factors boosting the building insulation market demand worldwide. However, factors such as less advertisement and lack of awareness of insulation products are estimated to hamper the growth of the mineral wool market. Rising demand from end-user industries and growing demand from emerging economies expected to provide lucrative growth opportunities to the mineral wool market during the forecast period.

The global mineral wool market is segmented by type, end-users, and region. Based on type, the market is segmented into glass wool, rock wool and other. Based on end-users, the market is segmented into building & construction, industrial & appliances, transportation, and others. Based on region, the global mineral wool market is analyzed across North America, Europe, Asia-Pacific, and LAMEA
