Abstracts

North America Premise Cable Market is expected to reach \$248 million in 2022 from \$83,714 thousand in 2015, growing at a CAGR of 16.9% from 2016 to 2022. Premise cables refer to inter-building or intra-building networking cables, which are used for data transmission in telecommunication closets, server rooms, and entrance facilities. These cables are used for short-distance data transmission, that is, within the premises. However, these cables cover a distance of around hundred m when operated on their maximum data transfer rate.

The growing demand for data on both fixed and mobile networks builds pressure on operators to invest in improved copper or fiber networks and provide connectivity in reach of consumers. In the recent years, increased Internet activity was witnessed, in terms of live content for media, which resulted in large volume of data generation. Therefore, requirement of high Internet speed and reliable data transmission cables drives the growth of the premise cable market. The improved cable technology and easy installation & connection are some of the factors augmenting the growth for the market. However, with the emergence of Internet of Things that promotes wireless networking, are expected to fail. This is expected to significantly impact the premise cable market in the forthcoming years.
