Abstracts

The North America waste management market is expected to reach \$229.3 billion by 2027, from \$208.0 billion in 2019, registering a CAGR of 5.3% from 2020 to 2027.

Waste management is the collection, disposal, and transportation of sewage, waste, and other materials. It consists of collecting and sorting solid waste and disposing of unwanted products and substances in a safe and sustainable manner.

Waste management consists of treating all types of waste such as solid, liquid, or gaseous. Waste management deals with industrial, hazardous, and municipal waste. Municipal waste is the waste collected from the residential sector in towns and cities. Industrial waste is the waste collected from industrial production and manufacturing processes. Hazardous waste is collected from sectors such as medicals, pharmaceuticals, paint manufacturing, and chemical industries. Further, collection and disposal of waste are some of the activities in waste management practices. Waste collection services refer to the gathering, transport, collection, storage, sorting, and handling of waste. Whereas, disposable services consist of activities such as separation of waste into recycling, landfills, and composting of waste.

Huge amount of waste is generated in the region, which fuels the growth of the North America waste management market. In addition, the development of North America waste management industry is primarily driven by growth in population in the region. In addition, stringent government regulations in the U.S. and Canada led to an increase in the collection and disposal of waste. Further, due to open burning, and illegal dumping

of waste affects the health of humans as well as animals, which has forced governments to create strict laws on illegal dumping of waste on land and in oceans.

However, inadequate waste disposal, and labor intensive and high cost of transportation, is anticipated to restrain the North America waste management market. Conversely, implementation of advanced waste management practices is expected to grow during the forecast period.

The North America waste management market is segmented based on service, type, and country. Based on type, the market is classified into industrial waste, hazardous waste, and municipal waste. Based on services, the market is bifurcated into disposable services, and collection services. The collection services segment is sub-segmented into storage & handling, sorting, and collection & transportation. Disposable services segment is further sub-segmented into recycling, landfills, composting and anaerobic digestion, and others.

Country wise, the North America waste management market analysis is conducted across the U.S., Canada, and Mexico. In 2019, U.S. was the highest contributor to the North America waste management market, and is anticipated to secure a leading position during the forecast period.

COMPETITION ANALYSIS

The major players, such as Biffa Plc, Covanta Holding Corporation, Bigbelly Inc, Remondis Se & Co. Kg, Veolia Environnement, Hitachi Zosen Corporation, Republic Services, Inc., Clean Harbors, Inc., Suez, Waste Management Inc.

KEY BENEFITS FOR STAKEHOLDERS

The report provides an extensive analysis of the current and emerging North America waste management market trends and dynamics.

In-depth market analysis is conducted by North America waste management market estimations for the key market segments between 2019 and 2027.

Extensive analysis of North America waste management market is conducted by following key product positioning and monitoring of the top competitors within the market framework.

A comprehensive analysis of all the regions is provided to determine the prevailing opportunities.

The North America waste management market forecast analysis from 2020 to 2027 is included in the report.

The key market players within the North America waste management market are profiled in this report and their strategies are analyzed thoroughly, which help understand the competitive outlook of the North America waste management market.
