On-board Connectivity Market Overview:

On-board connectivity refers to internet connectivity in aircrafts, ships, railways, and other modes of transportation systems. The on-board connectivity services include mobile phone internet access, wireless internet access, and other data sharing services. In addition, it allows smartphones, tablets, and laptops to send and receive texts, emails, and other multi-media messages. Although, the purpose of on-board connectivity for trains, ships, and on airplanes differs, the major reason behind its offering is to keep the passengers entertained while travelling. In addition, many airlines, trains, and public transportation buses have started offering on-board connectivity to their customers, which is the major factor fueling the on-board connectivity market growth. The global on-board connectivity market was valued at \$12,811.0 million in 2017 and is projected to reach \$36,842.3 million by 2025, growing at a CAGR of 14.3% from 2018 to 2025.

Increase in IT expenditure in the aviation, railway, and maritime industries and rise in disposable income of consumers are the major factors fueling the rise in demand for the on-board connectivity market. In addition, liberalization in the transportation sector in the emerging markets is also the major factor driving the on-board connectivity market growth. However, high cost associated with the deployment of on-board connectivity

systems is expected to impede the market growth. Also, the connectivity issue is anticipated to hamper the growth of the market, as high-speed trains move quickly from one cellular tower to another. Furthermore, increase in government initiatives to enhance customer services are expected to provide major opportunities for the growth of the on-board connectivity market.

The global on-board connectivity market is segmented based on component, technology, application, end use, and region. Based on component, the market is classified into hardware and services. In terms of technology, the market is divided into satellite and air to ground. As per application, the market is categorized into entertainment, and communication.
