## **Abstracts**

Organic electronics are unlike conventional inorganic semiconductors, organic electronic materials are architecture using organic (carbon-based) polymers or molecules using artificial technology developed in the context of organic & polymer chemistry. The organic electronics use various material such as semiconductor material, conductive material and dielectric & substrate material for construction. Further, these are used in various applications such as that of displays, lighting, battery, conductive ink and others.

Increase in demand due to adoption of technologies supporting sustainable development, demand for various applications, and need of organic electronic in latest technologies are the factors that drive the organic electronic market growth. Whereas, degradation of efficiency of organic electronics after a period and technical incompatibility hamper the organic electronic market growth. However, the increase in R&D activities for various applications is expected to create organic electronic market opportunity.

As per the organic electronic market analysis, the market is segmented into material, application and region. The material is further categorized into semiconductor, conductive and dielectric & substrate. The application segment is classified into display, lighting, battery, conductive ink and others. Region wise, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

Key players which have a major organic electronic market share include AGC INC., BASF SE, COVESTRO AG, Evonik Industries AG, H.C. Starck Inc., Heliatek GmbH, Merck Group, Novaled GmbH, POLYIC GMBH & CO. KG and Sumitomo Corporation, which are profiled in this report.
