Abstracts

Orthotics is a specialized medical field that includes construction and design of orthotic device braces, splints, and other artificial external devices used to support the spine or limbs or to assist/prevent relative movements. Orthotic devices are commonly used to treat conditions of the upper and lower extremities, frequently for patients with spina bifida, muscular dystrophy, and multiple sclerosis. Furthermore, these devices aid in recovery of patients suffering congenital conditions, trauma injury, postoperative, osteoarthritis care, and other conditions.

The global orthopedic orthotics market was valued at \$3,130 million in 2016, and is projected to reach \$4,658 million by 2023, growing at a CAGR of 5.8% from 2017 to 2023. The growth of the global orthopedic orthotics market is driven by surge in geriatric population and rise in prevalence of osteoporosis, osteoarthritis, and other bone disorders. Furthermore, rise in prevalence of bone injuries and increase in sports-related injuries due to growing physical health consciousness fuel the market growth. However, high costs associated with customized orthotic devices impede this growth. The global orthopedic orthotics market is segmented on the basis of posture, anatomical region, manufacturing, and region. Based on posture, it is categorized into static orthotic device, dynamic orthotic device, and other orthotic devices. On the basis

of anatomical region, the market is divided into upper limb orthotic devices, lower limb orthotic devices, and spinal orthotic devices. Based on the manufacturing, it is classified into prefabricated orthotic devices, custom-fitted orthotic devices, and custom-fabricated orthotic devices. By region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
