Abstracts

The global osteoporosis drugs market accounted for \$7,657 million in 2018, and is expected to reach \$10,479 million by 2026, registering a CAGR of 3.9% from 2019 to 2026.

Osteoporosis drugs are defined as therapeutic agents which are utilized in the treatment of osteoporosis. Furthermore, osteoporosis is a serious medical condition which is associated with the presence of fragile bones. In addition, these fragile bones are dense and prone to fractures. Moreover, the condition is caused due to the over production of hormone parathyroid and leads to limited mobility in patients suffering from the condition. Thus, this medical condition requires early diagnosis and medical treatment which includes the administration of various drugs such as bisphosphonates selective estrogen inhibitors modulator (SERM), parathyroid hormone therapy, calcitonin, rank ligand inhibitors and others. In addition, these drugs are administered through different routes in the body such as oral route of administration, intravenous route of administration and others.

The major factor that contributes to the growth of osteoporosis drugs market include rise in prevalence of osteoporosis. Furthermore, other factors that boost osteoporosis drugs market growth include surge in geriatric population across the globe and rise in adoption

of sedentary lifestyle worldwide. However, side effects of osteoporosis drugs, and stringent regulatory environment and the time-consuming drug approval process hampers the growth of osteoporosis drugs market. Conversely, high growth potential in developing economies is expected to offer lucrative opportunities during the forecast period.

The osteoporosis drugs market size is studied on the basis of drug class, route of administration, and region to provide a detailed assessment of the market. On the basis of drug class, it is segmented into bisphosphonates, selective estrogen inhibitors modulator (SERM), parathyroid hormone therapy, calcitonin, rank ligand inhibitors, and others. By route of administration, it is bifurcated into oral, injectable and others. Region wise, it is analyzed across North America (the U.S., Canada, and Mexico), Europe (Germany, France, the UK, Italy, Spain, and rest of Europe), Asia-Pacific (China, Japan, India, Australia, South Korea, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, and rest of LAMEA).
