The global virtual power plant market was valued at \$1.3 billion in 2019, and is projected to reach \$5.9 billion by 2027, growing at a CAGR of 21.3% from 2020 to 2027.

Virtual power plant, an aggregated decentralized power plant, consisting of decentralized power systems with the purpose to integrate different distributed energy sources such as solar PV cells, wind turbines, and hydroelectric plants. Additionally, virtual power plant offers efficient power generation even at peak load periods with a scope to trade or sell power in trading market. Virtual power plant is medium scale power generating unit integrating different renewable energy sources for solar, wind and other flexible power consumers and storage systems. A virtual power plant consists of different mixed assets that are connected via central control system processing wide range of information, such as current prices at the power exchange, price and weather forecasts, and grid information of the system operators.

Growing penetration for renewable energy in power generation sector coupled with shifting trend of power grids from centralized to distributed is expected to drive the market growth. Further reduction in energy cost and easy accessibility of energy storage will boost the market demand. For instance, Tesla reported in their recent virtual power plant project 70% decrease in grid consumption, while bills have been reduced

by up to 30%. Additionally, VPP is highly efficient and flexible to deliver during the peak load electricity in a short notice period compared to conventional power plant set up that will further drive the market growth. Flexibility in trading with virtual power plant due to price volatility attracted lot of new participants. Customers can sell excess energy at trade market as well as buy energy at lower price. Such features of virtual power plant is expected to further fuel the demand. However, high-frequency of electromagnetic and radio waves leads to health concerns in infants and old people, which may hamper this growth. Nonetheless, stringent government regulations regarding eco-friendly power generation will further enhance the market for renewable energy, thus fueling the demand for virtual power plant market.
