Abstracts

Personal care electrical appliances are used for personal grooming purpose. These products include hair care, oral care, and other personal hygiene products, which are either battery- or electricity-operated. The market is expected to grow at a steady pace for products that are already established in the market. However, the sales of comparatively newer products, such as hair stylers and oral care appliances are expected to witness faster adoption in the global market. The market has witnessed rapid growth in revenue, due to continuous increase in price of established products and premiumization trend. Buyers, especially in the developed countries, are conscious regarding brand and quality, which are crucial factors that influence them to buy premium products.

Improving economic environment, growing aging population, and increasing disposable incomes are the key drivers of this market. Lack of awareness regarding novel products, and durability are the key restraints for the market. The market segment for hair dryers exhibit mature product cycle in the developed economies with a strong market in the emerging economies. However, newer products, such as oral care appliances, are projected to gain awareness in the emerging economies. Lack of durability is another factor that hampers the market growth. Although premium products are durable, numerous local companies offer non-durable products, which create reluctance among customers toward buying these products. The personal care electrical appliances market generated a revenue of \$15,076 million in 2014 and is expected to reach a market value of \$28,007 million by 2022 with a CAGR of 8.7%.
