## **Abstracts**

The global phytosterols market is expected to grow at a CAGR of 9.62% from 2016 to 2022 to reach \$935 million by 2022 from \$490 million in 2015. Phytosterols are steroid compounds retaining cholesterol-like molecules but differ in double bond arrangement from cholesterol molecule. They are obtained from plants (fruits, nuts, oils, and corn) and are used as food additives or as food ingredients approved by regulatory bodies. They are used for their beneficial effects as they reduce triglyceride level in the human body for instance, in case of high cholesterol, it lowers raised cholesterol by preventing absorption of cholesterol in the blood stream and the cholesterol removed from body as waste by phytosterols mechanism. Moreover, phytosterols have other benefits such as its anti-oxidant effect that helps fight against cancerous cells of various types of cancers (ovarian, breast, stomach, and lung cancer). Products such as  $\beta$ -sitosterols, Stigmasterol, and Campesterols and other 100 plus phytosterols find applications in food & beverages pharmaceuticals, feed, and cosmetics.

The health benefits associated with phytosterols have increased their demand among consumers. However, poor solubility, poor bioavailability, and side effects such as constipation, diarrhea, bloating, and swelling are observed in pharmaceutical phytosterols, which are expected to drive the demand for improvement in the quality of drugs. Increasing demand for herbs and minerals extracts to be reinforced as food additives in beverages and foods are anticipated to create numerous opportunities for the market in the coming years.
