## **Abstracts**

The point of care tests refers to the diagnostic procedures which are conducted outside of the laboratories. Point of care diagnostic procedures are carried out by various point of care diagnostics devices which are used to test cholesterol and glucose levels, enzyme analysis, drugs of abuse testing, diagnosis of infectious diseases and pregnancy testing. In addition, cardiac markers, fecal occult blood tests and blood gases tests can also be performed by using point of care diagnostic devices.

The global point of care diagnostics market size is expected to reach \$43,336 million by 2022, growing at a CAGR of 9.4% from 2016 to 2022. Rising prevalence of various chronic and infectious diseases such as cardiac diseases, hepatitis, cancer, gastrointestinal, respiratory, and sexually transmitted diseases (STDs) play a pivotal role in the growth of the global point of care diagnostics market. Moreover, changes in life style patterns also cause several medical conditions, such as diabetes, hypertension, and obesity, which fuels demand for point of care diagnostic procedures for their diagnosis & monitoring. Stringent government regulations and reimbursement issues for the point of care devices may hamper the growth of the market.

The world point of care diagnostics market is segmented based on product, end user, mode of prescription and geography. Based on product, the world point of care

diagnostics market is further segmented into glucose monitoring kits; infectious disease testing kits; pregnancy and fertility testing kits; hematology testing kits, cardiometabolic monitoring kits, urinalysis testing kits, coagulation monitoring kits, tumor/cancer markers testing kits, cholesterol test strips, drugs of abuse testing kits, fecal occult testing kits and others (calcium assay kits and immunohistochemistry kits). The infectious disease testing kits are further categorized into hepatitis testing kits, HIV testing kits, respiratory infections testing kits, influenza testing kits, healthcare-associated infections (HAIs) testing kits, sexually-transmitted diseases (STDs) testing kits and others (topical diseases testing kits and nerve conduction study kits). The cardiometabolic monitoring kits segment is further sub-divided into cardiac markers kits, HbA1c testing kits, electrolytes testing kits and among others. Based on end user, the world point of care diagnostics market is segmented into professional diagnostic centers, research laboratories, home and others (medical universities, not-for-profit organizations and nursing homes). The professional diagnostic centers segment is further categorized into hospitals/critical care centers, outpatient healthcare settings, and ambulatory care settings. Based on the mode of prescription, the world point of care diagnostics market is segmented into prescription-based point of care diagnostic devices and over-the-counter (OTC) based point of care diagnostic devices market.
