Abstracts

The global polycystic ovarian syndrome treatment market was valued at \$2,902 million in 2018, and is projected to reach \$4,184 million by 2026, registering a CAGR of 4.7% from 2019 to 2026.

Polycystic ovary syndrome or PCOS is a hormonal disorder that is common among women of childbearing age. PCOS causes infrequent or prolonged menstrual cycle or excess male hormone levels. Presently, there is no cure for PCOS, however, medications are used to regulate menstrual cycle and manage symptoms of PCOS.

The polycystic ovarian syndrome treatment market is expected to experience a significant growth during the forecast period, owing to increase in prevalence of PCOS, rise in awareness among the patient population about PCOS, and increase in popularity of combination therapy drives the market growth. In addition, easy accessibility to PCOS therapeutics, rise in demand for PCOS medication, and technological advancements for detection of PCOS influence the market growth. However, lack of approved therapeutics and unknown etiology and pathophysiology of PCOS is anticipated to hamper the market growth.

The global polycystic ovarian syndrome treatment market is segmented on the basis of
