## **Abstracts**

The global portable air purifier market was valued at \$8,273.01 million in 2019, and is expected to garner \$13,756.52 million by 2027, registering a CAGR of 12.10% from 2020 to 2027. Air purifier is a device, which improves indoor air quality by eliminating pollutants from air. Portable air purifier that are used indoor to purify the air are studied in the report. These air purifier adsorb polluted air from the surrounding, thereby cleaning the air and dispersing it in the surrounding.

Air pollution continues to be a significant concern to public health worldwide and an alarming issue confronted by both developed and developing countries. In the developed countries such as the U.S. and Europe, air pollution has been rather severe and remained a considerable environmental problem. However, compared with most developed countries that had accomplished industrialization for years, developing countries are confronting more severe air pollution due to intense energy consumption, large-scale demolishment & reconstructions, and increase in emissions from transportation in the process of industrialization & urbanization.

Air pollution has impact on most of the organs and systems of human body. For instance, air pollutants can induce and aggravate diseases such as cardio cerebral vascular disease and ischemia heart disease. In addition, air pollution has adverse

effects on nervous system, digestive system, and urinary system. Furthermore, long-term ambient air pollution exposure is reported to increase all-cause mortality. Moreover, air pollution has resulted in alarming increase in prevalence of many respiratory diseases such as chronic obstructive pulmonary disease (COPD), asthma, and lung cancer. Thus, all these factors have collectively propelled the need for portable air purifiers, globally.

The report segments the global portable air purifier market based on type, technique, distribution channel, and region.
