Abstracts

The global premenstrual syndrome treatment market was valued at \$1,129 million in 2018, and is projected to reach \$1,516 million by 2026, registering a CAGR of 3.7% from 2019 to 2026.

Premenstrual syndrome or PMS refers to physical & emotional symptoms, which occur one to two weeks before the initiation of woman's menses. It is characterized by symptoms such as acne, tender breasts, mood swings, bloating, fatigue, and irritability. Lifestyle changes are anticipated to help relieve PMS symptoms. However, based on the severity of symptoms, different types of drugs such as analgesics, antidepressants, and diuretics are used.

The premenstrual syndrome treatment market is expected to experience a significant growth during the forecast period, owing to increase in awareness among patients, higher number of target population, rise in demand for PMS drugs, and easy availability of drugs. In addition, campaigns from government and non-government organizations to elevate female health status and education supports the market growth. However, unknown etiology and pathophysiology of PMS is anticipated to hamper the market growth.

The global premenstrual syndrome treatment market is segmented on the basis of drug type, distribution channel, and region. By drug type, it is classified into analgesics, antidepressants, oral contraceptives & ovarian suppression agents, and others. Based on type market is classified as prescription and OTC.
