Abstracts

The global recycled textile market size was valued at \$5.3 billion in 2018 and is anticipated to generate \$8.0 billion by 2026, growing at a CAGR of 5.2% from 2019 to 2026. Recycled textile is a product obtained after recycling and recovering old clothing and waste fibrous materials. Recyclable textiles are mostly found in municipal solid waste (MSW) such as waste or old clothing, and other sources such as carpets, furniture, tires, footwear, and non-durable goods such as sheets and towels. Recycling is done by processing old clothing and fabrics into new products. There are many ways to recycle textile waste such as mechanical recycling, chemical recycling, and others. Depending on the type of textile the process of waste sorting, threading, decoloring, re-dyeing, spinning, yarning and others are selected. Cotton is easy to recycle and usually involves low cost of recycling. Similarly, wool is also durable and requires low efforts for recycling as it is better in retaining the color and the requirement to re-dye them is minimal. However, the process involved in recycling wool costs high. Recycled textile offers both environmental and economic benefits such as reduction in pressure on virgin resources such as wool & cotton. It also helps to curb pollution and minimize water & energy consumption.

Increase in recycling activities have been a driving factor for the market growth. Moreover, rise in demand from various sectors such as retail, automotive, and building & construction drives the global recycle textile market growth. Furthermore, the low cost

of recycled products in comparison to new products is also expected to boost the overall recycled textile market growth. However, increased processing cost for textile waste may hamper the market growth. In-addition, the low-quality job offerings from the industry is also expected to restrain the recycled textile market growth owing to lack of skilled labor. Meanwhile, the development of recycling technologies is anticipated to provide lucrative growth opportunities for the recycled textile industry.

The global recycled textile market is segmented into type, end-user industry, and region. Depending on type, it is segmented into recycled cotton, recycled wool, recycled polyester, recycled nylon, and others. Recycled nylon is expected to grow fastest during the forecasts period followed by recycled polyester. On the basis of end-user industry, it is divided into automotive, retail, mining, building & construction, and others. Automotive and retail industry are likely to grow more in comparison to others owing to increased demand. Region-wise, recycled textile market analysis is done across North America, Europe, Asia-Pacific, and LAMEA (Latin America, Middle East, and Africa).
