Abstracts

The global refurbished DNA sequencing platforms market was valued at \$41 million in 2016 and is expected to reach \$112 million in 2023, registering a CAGR of 15.0% from 2017 to 2023. DNA sequencing is a technology in which several DNA strands could be sequenced through massive parallelization. Low cost, high accuracy and speed, and precise results even from low sample input are the main advantages DNA sequencing offers over microarray and other genomic analysis methods. Refurbished and used DNA sequencing platforms are relatively inexpensive instruments used for DNA sequencing, when compared with new DNA sequencing platforms.

In addition, the growth in number of genome mapping programs globally and increase in R&D investment drive the market growth. However, lack of skilled professionals, ethical & legal limitation related to DNA sequencing, and standardization concerns in sequencing procedures impede the market growth. Conversely, use of cloud computing as a potential data management service and the untapped emerging countries offer lucrative opportunities for the market players.
